DETAILED ACTION

Allowable Subject Matter

Claims 1-4 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art fails to disclose an apparatus and/or a method of the focus position of an optical pickup, among other features, comprising a brightness measuring apparatus having a half mirror and an objective lens and a signal processor for finding a highest brightness of a light image entering through the half mirror and the objective lens, and a optical pickup operates to start a focus servo, the positions of semiconductor lasers provided in the optical pickup or relative positions of a multi-lens and a light-receiving element of the optical pickup change continuously, the signal processor operates to find a change in the highest brightness of a spot light image incident on the half mirror through an objective lens provided in the optical pickup, wherein the positions are fixed once the semiconductor lasers or the multi-lens and light-receiving element have been moved to positions when the highest brightness has become a maximum highest brightness, thereby effecting an adjustment of the focus position of the optical pickup.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1) Terashi et al US6728185 disclose a device for assembling and adjusting an optical unit.

2) Yanagi et al US5142520 disclose a system for obtaining optimum focusing position in optical disc system.
